

IRC Server Template Guide

This guide is to help you through creating a new project using the template “IRCServer.zip”. This is not a normal visual studio solution, it is a visual studio template, so don’t try unzipping the **IRCServer.zip**, follow the steps beneath to create a new project using the template.

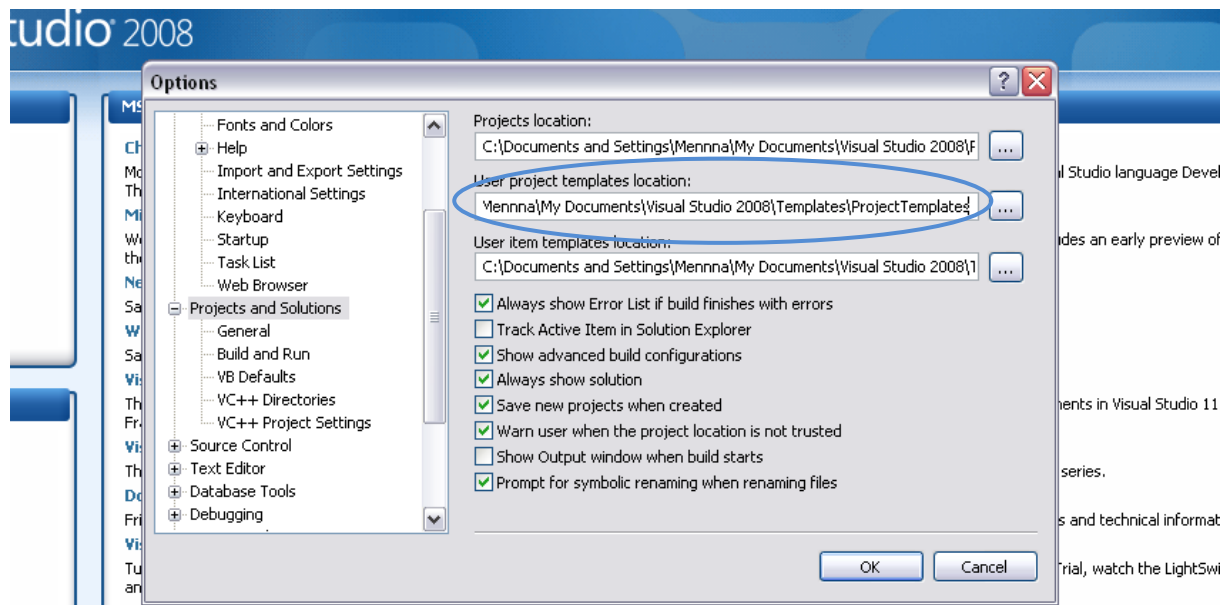

Visual Studio Project Template

Visual Studio project template provide reusable and customizable project and item stubs that accelerate the development process, removing the need to create new projects and items from scratch.

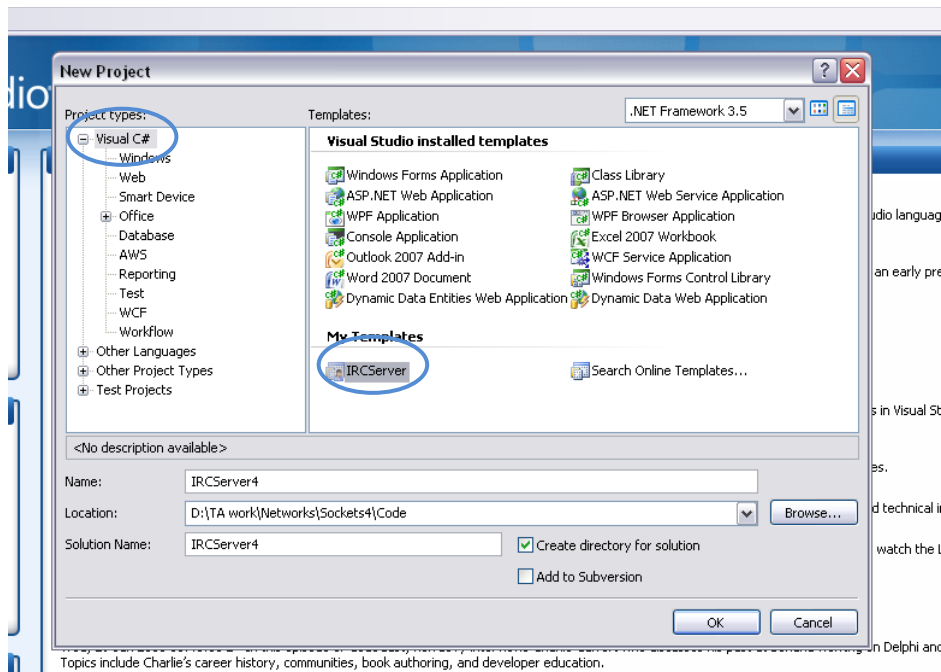

Using IRC Server Template

Steps:

1. Copy the default location of “**User project templates location**”: Tools -> Options -> Projects and Solutions node.

2. Copy the IRCServer.zip to that default location.
3. Create a new project: File -> New -> Project
4. Select “Visual C#” on the left panel and you should find IRCServer in “My Templates”

5. Select it and press the Ok button
6. A project will be created with all the classes and folders needed in the project.
